

Fix the leaks that cost you the pot.

A personalized GTO poker trainer that finds your specific mistakes — and drills them away. Live, installable, fully offline.

THE PROBLEM

Poker training is generic — vast theory libraries where players grind abstract spots, never the hands they actually misplay. Most can't name the three decisions quietly costing them the most money, so they never fix them.

THE SOLUTION

LeakTutor turns your own play into a fix-list: bring your hands (drill live or import a history) → see your top leaks, auto-detected → drill the exact fix, with a plain-English “why” on every hand. Not another spot library — a coach that knows your game.

WHY IT'S DEFENSIBLE

- Real solver strategy (open-source TexasSolver), precomputed & offline — credible GTO at zero server cost.
- Leak detection → targeted drilling: the personalization wedge incumbents don't nail.
- Installable PWA + beginner→intermediate path widens the funnel beyond grinders.

PRODUCT — BUILT & LIVE

- GTO-correct scoring, incl. mixed frequencies.
- Plain-English explanations on every hand.
- Auto leak tracker → one-tap targeted drills.
- Spaced-repetition review + daily streaks.

MARKET & MODEL

100M+ people play online poker; open-source solvers make credible content cheap; PWAs unlock mobile-first training. Freemium: free preflop + leak tracking; premium adds the full postflop corpus + bet-sizing, unlimited imports + postflop leak reports, and cloud sync. Content is solved once and reused forever → marginal cost per user ≈ \$0.
